Medline Surgical Gowns

Performance, Variety and Quality

Performance with Comfort

We have designed our surgical gowns to enhance the performance of your surgical team. All Medline surgical gowns are generously cut in the chest and sleeves for greater comfort and freedom of movement. Each gown features a hook & loop neck closure for an easily adjustable, gap-free custom fit. Medline's wide range of sizes and lengths satisfies the needs of every person in the O.R. with high-tech breathable fabrics keeping the wearer comfortable and dry, even during long procedures.

Abundant Choices

You want options in style, fabric and reinforcements to satisfy any preference in the OR. Medline's four gown families each feature their own distinct fabric and styles. With Medline, clinicians have the widest available range of choice in size, length, reinforcement type, and sleeve construction.

Dependable Protection

Medline's gown fabrics offer incredible protection. Low-linting and latex-free, each gown meets or exceeds performance recommendations of the EN13795* surgical gown standard. The Essential and Advanced materials' high hydrostatic head gives wearers the protection they need and the comfort they deserve. The unique Ultimate gown offers all-over impervious protection with exceptional breathability and coolness.

Colour Coding in accordance to the EN13795 standard

All Medline Surgical Gowns feature intuitive colour coding in accordance to the EN13795* standard. Product labels, neck bindings and transfer tabs display Purple for Standard Performance or Blue for High Performance. Droplets tie back to the US standard AAMI levels 1 to 4**. These colours, as well as the droplets on the gown itself, make it easy to choose the ideal gown for the individual requirements of any surgical procedure.

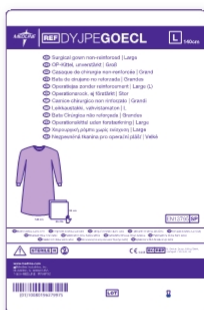

STANDARD PERFORMANCE SURGICAL GOWN

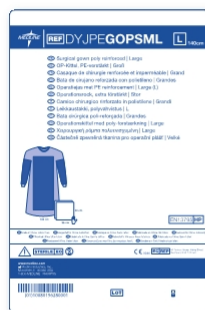

Non-reinforced or fabric-reinforced for **low to medium risk** of exposure

PURPLE and BLUE HELP YOU CHOOSE THE RIGHT GOWN – EVERY TIME

Colour-coding of the gowns, package labels and transfer cards indicate the level of protection from bodily fluids. Available in a variety of materials: Eclipse®, Essential and Advanced. Now it's easy to choose the right gown for every procedure.

Package Label Standard Performance Gown

Package Label High Performance Gown

EN13795 Compliant
Medline colour-coded surgical gowns are 100% compliant with EN13795 directives. Developed by the European Committee for Standardisation and its Technical Committee, EN13795 provides guidance on the characteristics of surgical gowns and drapes for protection from transmission of microorganisms during invasive procedures.

HIGH PERFORMANCE SURGICAL GOWN

Poly-reinforced for **high risk** of exposure

To optimize gown usage in the Operating Room, Medline has developed the OPS™ allowing you to “optimize” your gown usage according to your individual clinical needs.

Optimized Protection System for surgical gowns: OPS™

Based on extensive clinical feedback, we have identified Comfort, Protection and Cost as the most important criteria to consider when selecting a surgical gown.

- A comfortable surgical gown is desired when performing longer procedures.
- An increased protection level is necessary as fluid challenges increase during surgery.
- For short and/or low fluid intensive procedures, customers are willing to sacrifice some degree of comfort for the right cost.

Every hospital has its unique combination of clinical requirements based on the procedures it performs. For this reason, Medline has created the Optimized Protection System™ - providing the ideal portfolio to make choosing the right gown simpler and more cost effective.

OPS™ Essential

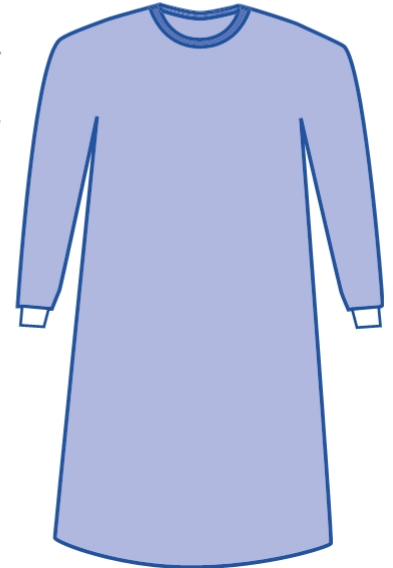

Adequate protection at lowest cost

- Light weight material, sufficient for shorter and/or low fluid procedures such as ear and mouth surgery, small orthopaedic and general surgeries etc
- Comfortable - Softened SMMS technology offers exceptional softness and breathability
- When cost is of highest concern

OPS™ Advanced

No compromise between comfort and protection

- Breathable and comfortable – quickly transfers heat away to keep the wearer cool and comfortable
- Excellent protection- excellent barrier performance with high Hydrostatic head
- Optional raglan cut- provides roominess and facilitates easier movement
- Ideal for the majority of procedures in all surgical areas

OPS™ Ultimate

The intelligent gown with breathable membrane technology

- EN13795* High performance across the entire gown
- Fully impervious to blood and blood borne pathogens (AAMI** PB70, PB71 tested)
- Breathable and cool - reacts to increasing body temperature by increasing water vapour transmission
- Ideal for all procedures where breathable all-over protection is needed such as long Cardio, Orthopaedic, Transplant surgeries, etc.

Eclipse®

A soft and comfortable gown

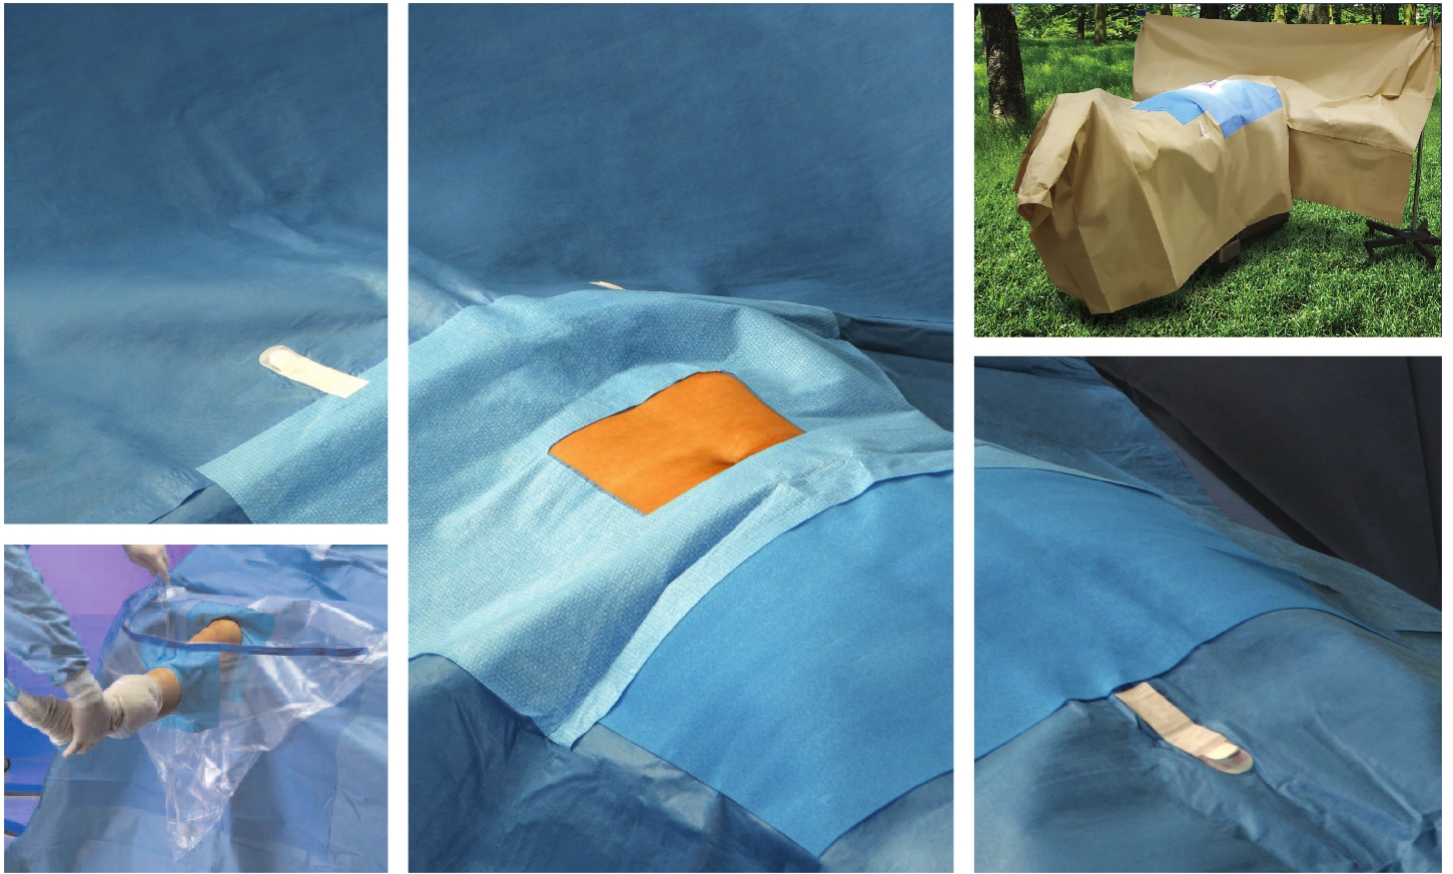

- Outstanding comfort and breathability - textile like appearance
- Sufficient protection

Right Protection ... Right Comfort ... Right Cost

*The EN 13795 is the European harmonized standard specifying requirements for single-use and reusable covering (i. e. surgical gowns, surgical drapes) used as medical devices for patients, clinical staff and equipment and intended to prevent the transmission of infective agents between patients and clinical staff during invasive surgical procedures.

**AAMI: Association for the Advancement of Medical Instrumentation. The AAMI PB70 is the US reference standard establishing a system of classification for protective apparel and drapes based on their liquid barrier performance and specifies related labeling requirements and standardized test methods.

Medline Surgical Drapes

Designed, Tested and Trusted By OR Professionals

Medline® Surgical Drapes were designed based on the feedback from OR Professionals across the entirety of Europe. We continue to use such feedback as the basis for introducing new products, as well as improving features and designs of existing products. Medline® surgical drapes offer the best features available to the market such as the innovative biodegradable EcoDrape™ fabric, and the clever Panther Paw™ hook & loop tube holder. Additionally, all Medline® Surgical Drapes are 100% Latex-Free and fully compliant with the EN13795* standard.

Choice

Medline® is the market's only surgical drapes and packs provider to offer a wide variety of fabrics. Medline® surgical drapes are available in the classic Eclipse® spunlace material, as well as in other cutting edge fabrics such as absorbent bi-laminate, light and drapeable SMS, or top-of-the-line tri-laminate options.

Absorbency

Medline® specialty surgical drapes are all manufactured with oversized absorbent areas. This ensures the surgical field is kept as clean as possible, and reduces post-operative clean-up time. The bi-laminate and tri-laminate fabrics provide absorbency across the whole surface of the drape. On repellent spunlace and SMS fabrics, an oversized heavy-duty absorbent reinforcement is applied to the critical areas.

Drapeability and Strength

Medline® surgical drape fabrics are designed to provide high drapeability for facilitated efficient patient draping. In addition to high drapeability, all materials are made from robust non-woven fabrics and films to ensure sterility of the surgical field during complex procedures.

Colour

Medline® specialty surgical drapes feature an intuitive labeling system complete with detailed product images and specifications. Product labels are printed in various colours based on the material being used. This aids the surgical team in selecting the correct product best fitted for each specific need.

Medline Optimized Protection System: OPS™

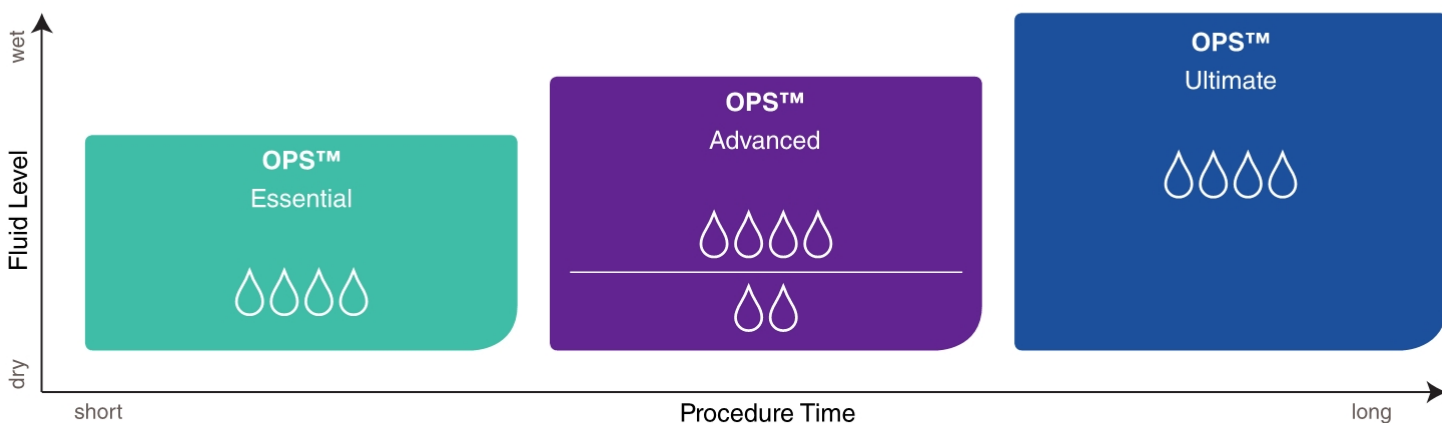

Protection, cost and standardization are the most important criteria when selecting a surgical drape. Medline OPS™ offer three different types of drapes to suit your individual clinical needs and “optimize” your drape usage.

- **OPS™ Essential** – For short and/or low-fluid procedures. Our most economical, yet effective drape.
- **OPS™ Advanced** – For medium fluid procedures, with absorbent reinforcement around critical areas and a soft contact with patient skin.
- **OPS™ Ultimate** – When increased protection is necessary to accommodate fluid increases during longer and more complex procedures. Combines strength, absorption and comfort.

When you use Medline’s OPS™, you can rely on:

- Appropriate protection for the type and length of the procedure
- Cost efficiency by using the appropriate drape based on the procedure
- Greater standardisation by using the same drape for the same procedure every time

Choose From Three Levels of Fluid Protection to Suit Your Procedure

Adequate protection for short procedure

- ▶ Drapes are made of bi-laminate fabric
- ▶ Meet the High Performance (HP)* level
- ▶ Fully impervious to blood and bloodborne pathogens**
- ▶ Sufficient for short and low-fluid procedures

The right choice for longer procedure with more fluids

- ▶ Drapes are made of SMS fabric
- ▶ Meet the High Performance (HP)* level for the reinforced drapes
- ▶ Fully impervious to blood and bloodborne pathogens** on reinforced area
- ▶ Specialty pouches and reinforcements are available

Maximum protection for longer, more complex procedures

- ▶ Drapes are made of tri-laminate material
- ▶ Meet the High Performance (HP)* level
- ▶ Fully impervious to blood and bloodborne pathogens**
- ▶ Recommended for long and high-fluid procedures
- ▶ Specialty pouches and reinforcements are available

Fluid protection levels according to standards.

Each OPS™ drape is colour-coded and the product label identifies Standard Performance (SP) level or High Performance (HP) level per the EN13795 standard*. The droplets correspond to the 4 AAMI classification levels**.

Protection	AAMI**	EN13795*
4 droplets	4	HP
3 droplets	3	SP/HP
2 droplets	2	SP
