

ENVIRONMENTAL POLICY

Mediplast is providing medical equipment to hospitals and clinics in the Nordic countries as well as in other countries.

The company's environmental work is an ongoing process throughout the lifecycle of the products; from raw materials, manufacturing, transportation, to use and waste disposal at the customer's.

Mediplast strives for a sustainable environmental and social development and therefore environmental work is an integrated and natural part of our business. By working actively and preventively with environmental issues, we aim to minimize our environmental impact. To achieve our objectives and ambitions, our starting point is the UN's 17 global goals according to the 2030 Agenda for Sustainable Development, as well as Sweden's 16 environmental quality objectives, to:

- comply with applicable laws, regulations and other compliance obligations
- increase knowledge and awareness of environmental issues among all employees
- influence, make demands and collaborate with other companies, suppliers, authorities and organizations
- see environmental measures as investments
- constantly strive to improve the utilization of our resources within the company

Malmö 2nd of February 2023

Johan Bongstorp
Managing Director
