

SUCTION CATHETER

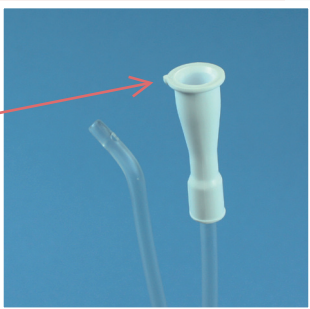

Straight, coudé (anged tip)
as well as with vacuum control

Medioplast offers an assortment of suction catheters, manufactured for different needs in care. Dependent on the area of use, we not only offer various lengths and sizes but also various designs, materials and packaging.

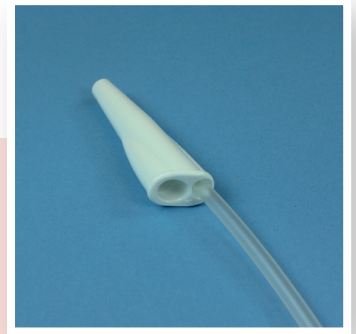

DESIGN

All suction catheters have a central, soft hole at the tip **without any sharp edges**. There are also two opposite relief holes, about one cm from the end to secure an atraumatic suction.

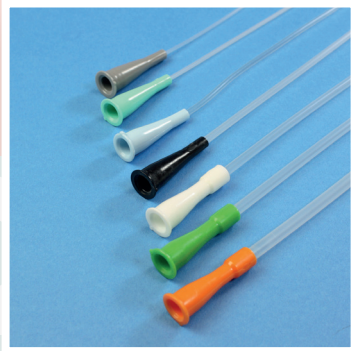

The coudé catheter has an **angeled tip** that makes it possible to control the direction of the catheter in the bronchial tree. A little lump on the connector indicates the direction for which the tip is bent.

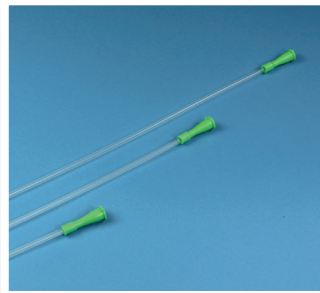

Suction catheters with built-in **vacuum control** are available. These will enable you to control the suction strength with your fingertip through intermittent suction technique.

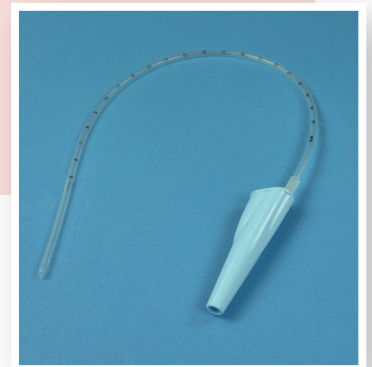

All suction catheters have a colour coded connector according to the standard for suction catheters **EN ISO 8836:2019** in order to identify the correct size.

Straight catheters are available in **3 lengths**, incl. connector (4 cm), 25 cm, 40 cm, 53 cm.

Suction catheters with vacuum control are available in **two lengths**, incl. connector (6 cm): 35 cm suction catheter with centimeter graduation as well as 53 cm without graduation.

Coudé suction catheter (angeled tip) are available in 53 cm length, incl. connector (4 cm).

All suction catheters are single-use, delivered sterile and with a **shelf life of 5 years**. Sterilisation method, ethylene oxide.

MATERIALS

Mediplast offers suction catheters in two different materials, **PVC without phthalates or TPE** which is a PVC-free material. The softening agent (plasticizer) used for the PVC is a non-phthalate, called ATBC.

The material in a suction catheter is rarely recycled, and in most cases it is incinerated. Because of environmental concerns, today there is an effort to not use PVC, as it consists of chlorinated plastic that forms hydrochloric acid (HCl) during combustion. PVC requires specialized facilities to handle the hydrochloric acid that is formed, and since there are PVC-free alternatives, they are often recommended in stead.

For the user, there could be a small difference in the two materials. The PVC-free alternative is more rigid, whereas the suction catheter of PVC is softer and more flexible. This could be a factor when choosing material. All products are Latex-free.

PACKAGING

The product packaging is a so-called **peel pack** made of paper and plastic. It has a hole at the top to hang it.

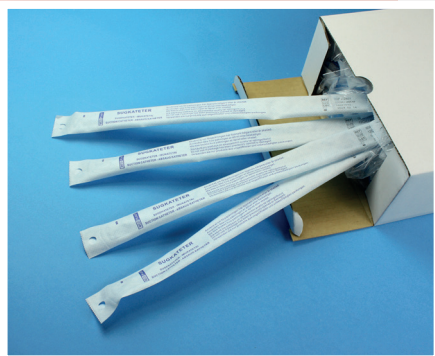

The packaging also has a blue dotted interior, which is a coating that makes it easy to separate the paper from the plastic **without tearing it.**

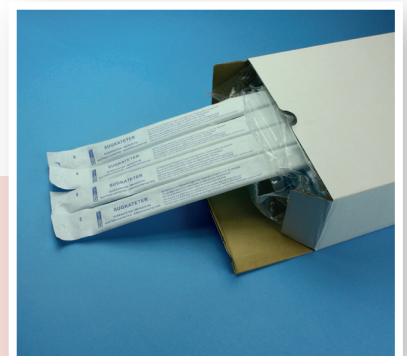

The products are packaged according to the three-layer principle. 100 pc of suction catheters in one carton ward box , 6 ward boxes with 600 suction catheters in one transport box. The smallest unit that can be ordered is 100 pc = MOQ.

Mediplast is now able to offer **individually packaged** suction catheters, with the intention to facilitate to take a product out of the ward box and keep the remaining products straight and flat inside the box.

In the standard packaging, the suction catheters are placed in **perforated sheets** in the carton ward box.

Working with people's health is an important assignment. At Mediplast we are in daily contact with dedicated healthcare personnel who do their utmost to deliver better and safer care. These days there is an increasing requirement to work with more patients in less time and with fewer resources.

Mediplast is by your side, always ready to deliver knowledge and innovative solutions with the aim of improving healthcare.

We believe in close relationships. By being present in various care environments on a daily basis, we are able to see your needs and understand your wishes. And through a high level of accumulated expertise and years of experience, we can provide knowledge and advice that really makes a difference, always with the ultimate aim of providing patients with the best possible care.

A close partner to Nordic healthcare.

Mediplast is a Swedish supplier of medical technology products. Our range consists of high-quality products under our own brand as well as selected products from well-known suppliers.

Disposal

Peelpack: Divided into two parts - Paper → paper disposal

Plastic (PP/PE) → plastic disposal

Inner pouch in wardbox: LDPE → plastic disposal

Wardbox, white: → paper disposal

Transportbox, brown: → paper disposal
