

Indication:
 Can be used as a fixation dressing, under plaster and splints and for dermatological use. Particularly suitable over joints, amputations and severe bandaged areas. Only to be used on undamaged skin.

Tubular bandage, double stretch

MEDIPLAST offers DANAFast Double Stretch, a tubular elastic bandage that stretches in length and width and thus easy to apply. Can be cut in desired length and can be applied in single or double layer, no additional fixation is required. Good air permeability. Colour coded with a woven line which makes choice of size easy.

Viscose, Polyamide, Elastane
 Length: 10 meters unstretched
